

How PhotoShelter Keeps Your Data Safe

Since its inception in 2005, **PhotoShelter has never had a security or privacy breach** – echoing our long-standing commitment to protecting your data.

Our Dedicated Approach to Your Data Protection & Compliance

PhotoShelter is committed to providing you with data transparency, privacy, and security. That's why leading brands and businesses trust PhotoShelter to protect the billions of assets we store. Here's how our data team delivers on our commitment to ensure your assets remain protected and compliant.

GDPR Compliance

Since 2017, PhotoShelter has been fully GDPR compliant. Defense Priorities and Allocations are in place for all contracts and sub-processors. As of 2023, PhotoShelter's DPO is CTO Kathy Carter. Here you can view our public Privacy Statement and contact information for Right of Removal: <https://www.photoshelter.com/support/privacy>

Data Redundancy

PhotoShelter stores multiple copies of your data to make sure it's protected no matter what — even in the event of a natural disaster. 4 copies of your data are uploaded to at least 2 geographically-distributed data centers and we run automated data recovery tests every week.

Edge Security

PhotoShelter's Edge Compute Network (PSECN) uses geographically-diverse servers around the world to process your data closer to you. This approach lowers cybersecurity risk, reduces network latency, and increases download/upload speed.
