Third Light

Enterprise Edition

Our flagship product for managing your digital assets is installed on dedicated hardware, with all features included and unlimited capacity

Third Light's Digital Asset Management system provides your organisation with a centralised, secure solution for managing your digital files and controlling user access to your files.

The Enterprise Edition supports large number of users, and is ideally suited to organisations with multiple departments or offices that need to share media from a central repository.

This edition includes all of the features of our Intelligent Media Server (IMS) and offers you a wide range of workflow functionality, superior performance and flexible integration options.
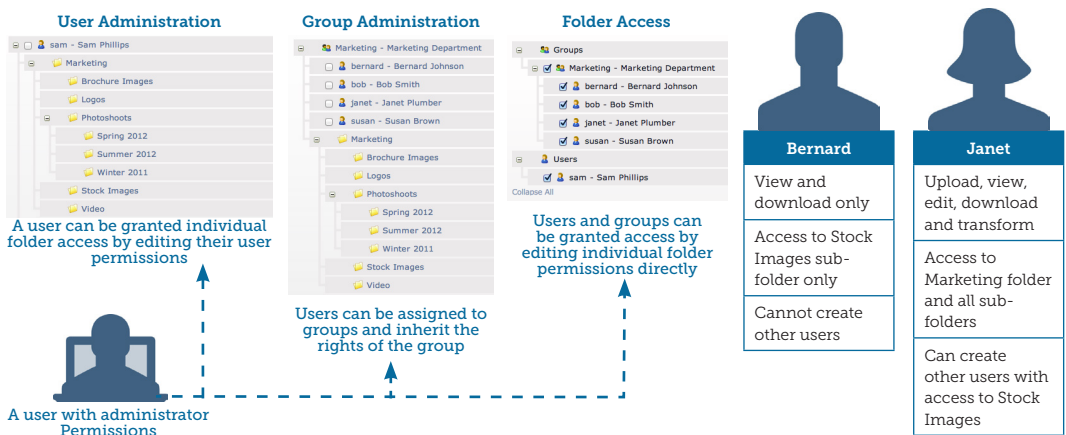

Benefits

- File library provides centralised management and easy organisation of your files
- Manage access of users to areas or folders for viewing and downloading

files.
- Resize, reformat and share media using automated tools
- Add approval workflows
- Reporting and auditing tools for monitoring the usage of your files
- Ideal for organisations with staff in multiple locations
- Can be hosted or licensed and installed on your own equipment
- Options for training, telephone support and on-site deployment services
- Suitable for storing 250GB or more of data with over 100 users

IMS is intuitive to use, providing useful prompts and email alerts to users, which minimises the need for staff training on how to use the system.

User Administration

A user can be granted individual folder access by editing their user permissions

A user with administrator Permissions

Group Administration

Users can be assigned to groups and inherit the rights of the group

Folder Access

Users and groups can be granted access by editing individual folder permissions directly

Bernard

View and download only

Access to Stock Images sub-folder only

Cannot create other users

Janet

Upload, view, edit, download and transform

Access to Marketing folder and all sub-folders

Can create other users with access to Stock Images

Features

Integration with your intranet content

Our Enterprise Edition offers a Fileserver module that enables you to work from your local intranet drive, while your files are synchronised with IMS.

You can open, edit and save documents from any application (with no special plugins) and still keep track of your content inside IMS.

Users work in a shared network drive on your company intranet

IMS Server

Updates stay in sync

Administrator uploads content to IMS

Fileserver Module

User administration

Administrators can set up users and user groups with access to specified folders in IMS, and assign permissions to users.
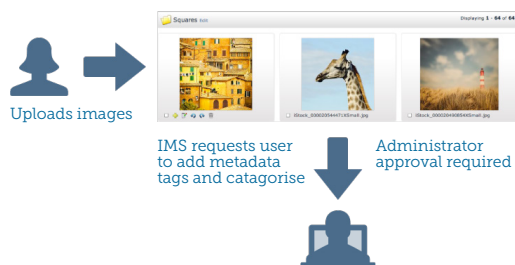

IMS keeps an audit trail of all user activity, allowing you to monitor how content is being used.

When files are uploaded, the Enterprise Edition detects duplicates and alerts users, preventing unintentional copies.

Workflow management

The Enterprise Edition enables you to manage how users work with or view files and capture metadata descriptions in an unobtrusive, streamlined workflow.

For example, when files are added to your server, you can request that the user categorizes their file before passing it to an administrator for approval, or ensure that a guest user provides required information before they can download a file.

Uploads images

IMS requests user to add metadata tags and catagorise

Administrator approval required

Reuse content

You can use the smart download features to resize, reformat and share media.

IMS helps your staff transform images and video into different formats and sizes, for example, by reducing a high-resolution TIFF file to a web-sized JPEG.

The Enterprise edition includes support for manipulation of images and documents, and makes working with video straightforward. No plugins are required—IMS supports video on all platforms.
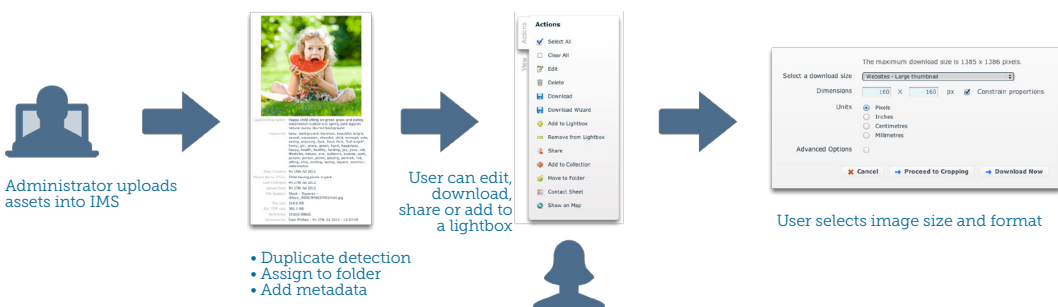

Customisation and rebranding

The Enterprise Edition provides advanced customisation features and complete control over the menus, fields and appearance of your product. For example, you can add multiple theme packs and languages to your site, or set the search engine to show or hide metadata depending on the role of the user.

Additionally, you can install multiple instances of IMS on a single server, enabling you to support branded versions for different departments or clients and resell IMS as a service to your clients.

Built with IT departments in mind

Your IT department will benefit from the Enterprise Edition's mature and feature-packed server and hosting options. The Enterprise Edition provides backup and replication, storage management tools, developer API and integration with your Active Directory network.

Administrator uploads assets into IMS

User can edit, download, share or add to a lightbox

User selects image size and format

• Duplicate detection
• Assign to folder
• Add metadata

Specifications

The Third Light Enterprise Edition is perfect for integrating with your existing business systems.

Storage management

- The Third Light Storage Manager allows you add more space when needed, without disruption.
- Prioritize your fastest disks to load popular content.

> We can help you fine-tune your storage needs based on the number of users you have and the type of content. We'll help you plan for future growth and can provide any needed hardware, hosting or backups for your system.

Regular software updates

- Regular software updates provide new features, security updates and enhancements. You will receive a notification when an update is available.
- Updates are quick and easy to install and can be applied without the need for any manual security patches or administration.
- Updates are included in your annual support and maintenance subscription. Email and telephone support is available if required.

Flexible deployment options

Flexible deployment options:

- Install IMS on your own equipment for fast, local network access with unlimited bandwidth
- Outsource the system hosting if you need flexibility.
- Host your IMS with Third Light, or with Amazon EC2 in the Cloud.

Hosting options

Hosting options
Host with Amazon EC2
Host with Third Light
Host with your own service provider

Installation options

Installation options
Install on VMware
Install on Hyper-V
Install on new or existing Intel Xeon server

Integration with authentication servers

- Ready to connect to Active Directory or OpenID servers, to provide instant access to your existing users.

Availability and redundancy

- High-availability, data mirroring and backups.
- Data can be automatically synchronized to a secondary server (local or remote), and you can roll back to a previous version if required.
- Connect to an existing backup service.

Developer APIs

- Feature-rich and accessible JSON interface enables you to embed features into other projects using.
- Extensively documented example code.
- Share the same API used by Third Light's development team.

Architecture

- Built on Linux with a robust operating system.
- Tested and proved to ensure high availability and system uptime.
- Ready for hosting in the cloud.

Support for file formats

Support for a wide range of file formats, including numerous proprietary or complex file types:

- All common image formats
- Video (including HD)
- RAW files from over 15 different vendors
- Adobe PhotoShop, Illustrator, InDesign files
- Office documents (Word, Excel, Powerpoint) including text search
- PDFs with support for searching inside content
- Read and import any IPTC, EXIF and XMP metadata (including custom metadata)
- Support for ICC colour profiles, including remapping to RGB, greyscale and CYMK.

Full support for your implementation

- Use our free data migration service to migrate your existing content
- We provide onsite server setup support and training

The IMS Enterprise Edition includes features not available on our Standard and Premium Editions

Only on Enterprise Edition

✓ Fileserver Module
✓ Storage Manager
✓ Authentication integration
✓ Multiple IMS instances
✓ Data mirroring and backups
✓ Unlimited storage
✓ Free data migration service
✓ Includes all features of Premium Edition

Prices

The Enterprise Edition is available as a core product with a range of optional services. You can start with a primary server license and add licenses for additional components.

Core Product

Third Light Enterprise Edition license	£6,999
Annual telephone support and software maintenance	£1,799

Optional Services

The following additional options are available:

Backup Server software license	£2,799
High-performance 2TB Intel Server with RAID, fully installed*	£1,999
Host your server with Third Light	£1,850
File Server Module (per year)	£500
API and developer access (per year)	£500
Active Directory and OpenID (per year)	£300
White Label themes and multi-tenant features (per year)	£300
HTTPS encryption (per year)	£300

Training and Handover

Training workshops (on site; 4 people)	£799
Telephone training session	£299
Remote hands installation help	£299
Migrate your existing data to a new server hosted by Third Light	FREE

* Third Light can supply servers with capacity between 500GB and 80TB.
